

Coursera Capstone 1 GAC (Google Data Analytics Certificate)

Alexander

2022-05-05

Objective to ‘Ask, Prepare, Process, Analyze, Share, and Act’ on the Cyclistic Bike-sharing data.

Inspired by Quentin Ferreira, Khushbu Chouhan and Nhi Yen

Ask

Key business task: The conversion of casual users to annual members.

Prepare

```

Some station names are lacking in the first 6 month, for instance, when using electric bikes. However, the data integrity is improving (reference to data reliability(ROCCC)).

Writing csv's with new names and exporting to a new directory

```
write.csv(may_21, "may_21.csv")
write.csv(jun_21, "jun_21.csv")
write.csv(jul_21, "jul_21.csv")
write.csv(aug_21, "aug_21.csv")
write.csv(sep_21, "sep_21.csv")
write.csv(oct_21, "oct_21.csv")
write.csv(nov_21, "nov_21.csv")
write.csv(dec_21, "dec_21.csv")
write.csv(jan_22, "jan_22.csv")
write.csv(feb_22, "feb_22.csv")
write.csv(mar_22, "mar_22.csv")
write.csv(apr_22, "apr_22.csv")
```

Process

Calculating the number of rows in total to verify the merge of dataframes

```
tot_rows <- nrow(may_21) + nrow(jun_21) + nrow(jul_21) + nrow(aug_21) + nrow(sep_21) + nrow(oct_21) + nrow(nov_21) + nrow(dec_21) + nrow(jan_22) + nrow(feb_22) + nrow(mar_22) + nrow(apr_22)
```

Creating the bind by merging all the dataframes together (2022 quarter 1 plus April and March additionally) and seeing if the data types were preserved and the files were transferred

```
df_1 <- do.call("rbind", list(may_21, jun_21, jul_21, aug_21, sep_21, oct_21, nov_21, dec_21, jan_22, feb_22, mar_22, apr_22))

head(df_1)
```

```
##           ride_id rideable_type           started_at           ended_at
```

```

## 6   -87.63  41.89  -87.62      casual
```

Checking the number of rows match up

```
if (tot_rows == nrow(df_1)){
  print("Binding complete, data verified.")
} else{
  print("Error, please verify your data.")
}
```

```
## [1] "Error, please verify your data."
```

The number of rows is not similar, perhaps due to a different number of trips around the year. Perhaps we need more data, but it should be scrutinized accordingly (as indicated later in the month overview visualization).

Checking for double entries (a spreadsheet version was made for highlighting N/A values)

```
distinct (df_1)
```

```

Analyze

A quick analysis to find the mean of the ride_length column including non- and members, and the max ride length in days

```
mean_r_length <- as.numeric(mean(df_1$ride_length))
cat("The average ride length over the year is:",mean_r_length,"minutes. ")
```

```
## The average ride length over the year is: 21.01684 minutes.
```

```
max_r_length <- as.numeric(max(df_1$ride_length))/60/24
cat("The longest ride for the year was:",max_r_length,"days")
```

```
## The longest ride for the year was: 38.8501 days
```

Comparing member and non-member stats.

```
df_1 %>%
  group_by(member_casual) %>% summarise(average_ride_length = mean(ride_length), median_length = median(
    max_ride_length = max(ride_length), min_ride_length = min(ride_length))
```

```
## # A tibble: 2 x 5
##   member_casual average_ride_length median_length max_ride_length min_ride_length
##   <chr>          <drtn>          <drtn>          <drtn>          <drtn>
## 1 casual        31.34119 mins    15.53 mins    55944.15 mins    0.02 mins
## 2 member        13.07831 mins     9.12 mins    1559.90 mins    0.02 mins
```

Calculating the total no. of rides.

```
# total ride taken (ride count) by members and casual riders
df_1 %>%
  group_by(member_casual) %>%
  summarise(ride_count = length(ride_id))
```

```
## # A tibble: 2 x 2
##   member_casual ride_count
##   <chr>          <int>
## 1 casual        2625876
## 2 member        3415047
```

```
# Compared to 2021 numbers
```

```
cat("member_casual ride_count 2021

1 casual          2529064
2 member          3072283")
```

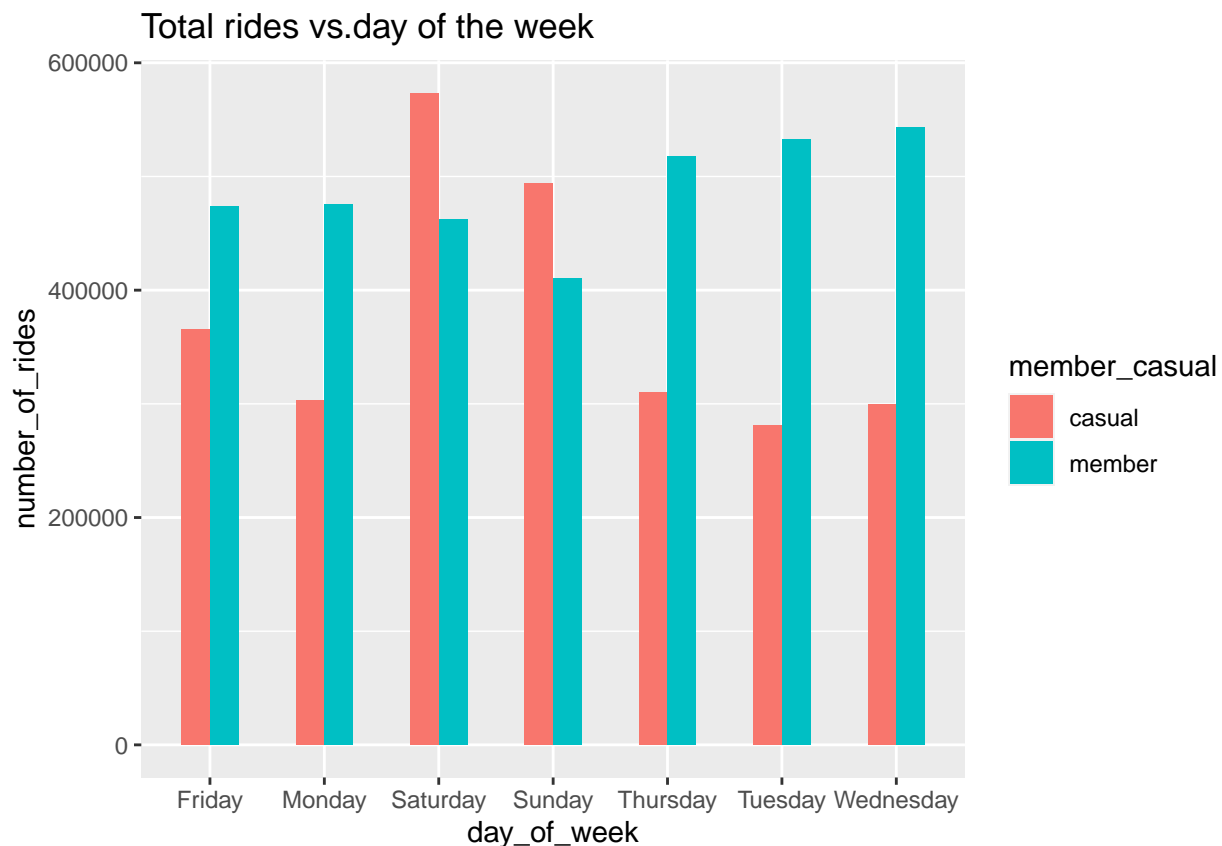

```
## member_casual ride_count 2021
##
## 1 casual          2529064
## 2 member          3072283
```

Takeaway; the analysis show with the respect to seasonal, economic and societal etc. changes (numbers from first quarters of 21 in comparision) and other influences that member and casual rides are more aligned in volume.

Share

Visualizing the days of the week with no. of rides taken by riders

```
df_1 %>%
  group_by(member_casual, day_of_week) %>%
  summarise(number_of_rides = n(), .groups = "drop") %>%
  arrange(member_casual, day_of_week) %>%
  ggplot(aes(x = day_of_week, y = number_of_rides, fill = member_casual)) +
  labs(title = "Total rides vs.day of the week") +
  geom_col(width = 0.5, position = position_dodge(width = 0.5)) +
  scale_y_continuous(labels = function(x) format(x, scientific = FALSE))
```

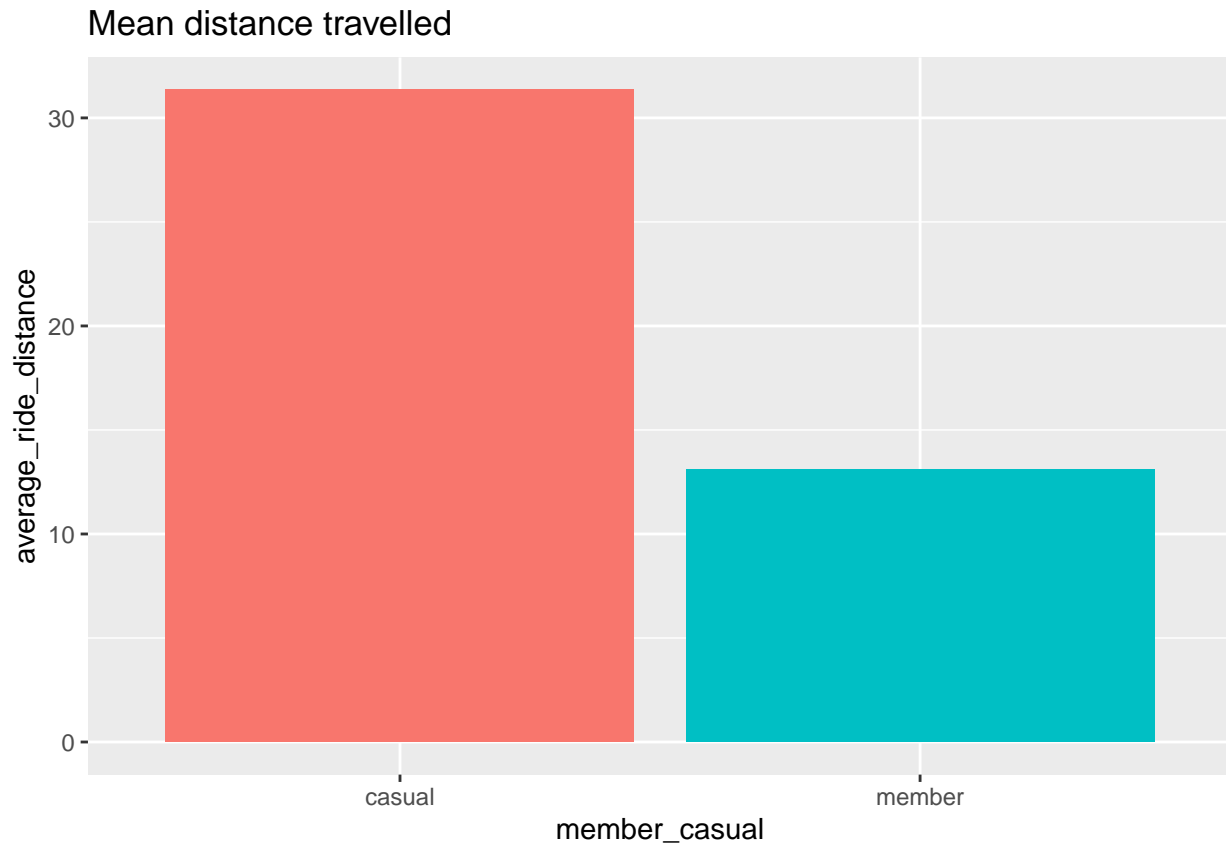

Take away: The pattern in usage on the various days of the week reveals, maybe not surprisingly, that members usage is for commuting on normal weekdays while causals primary utilizes for leisure activities at weekends (with a opposite relationship true).

Visualizing and comparing casual and member rides by distance

```
# visualizing and comparing casual and member rides by distance
df_1 %>%
  group_by(member_casual) %>%
  summarise(average Ride distance = mean(ride_length)) %>%
  ggplot() + geom_col(mapping = aes(x = member_casual, y = average_ride_distance, fill = member_casual))
  labs(title = "Mean distance travelled")
```

Don't know how to automatically pick scale for object of type difftime. Defaulting to continuous.

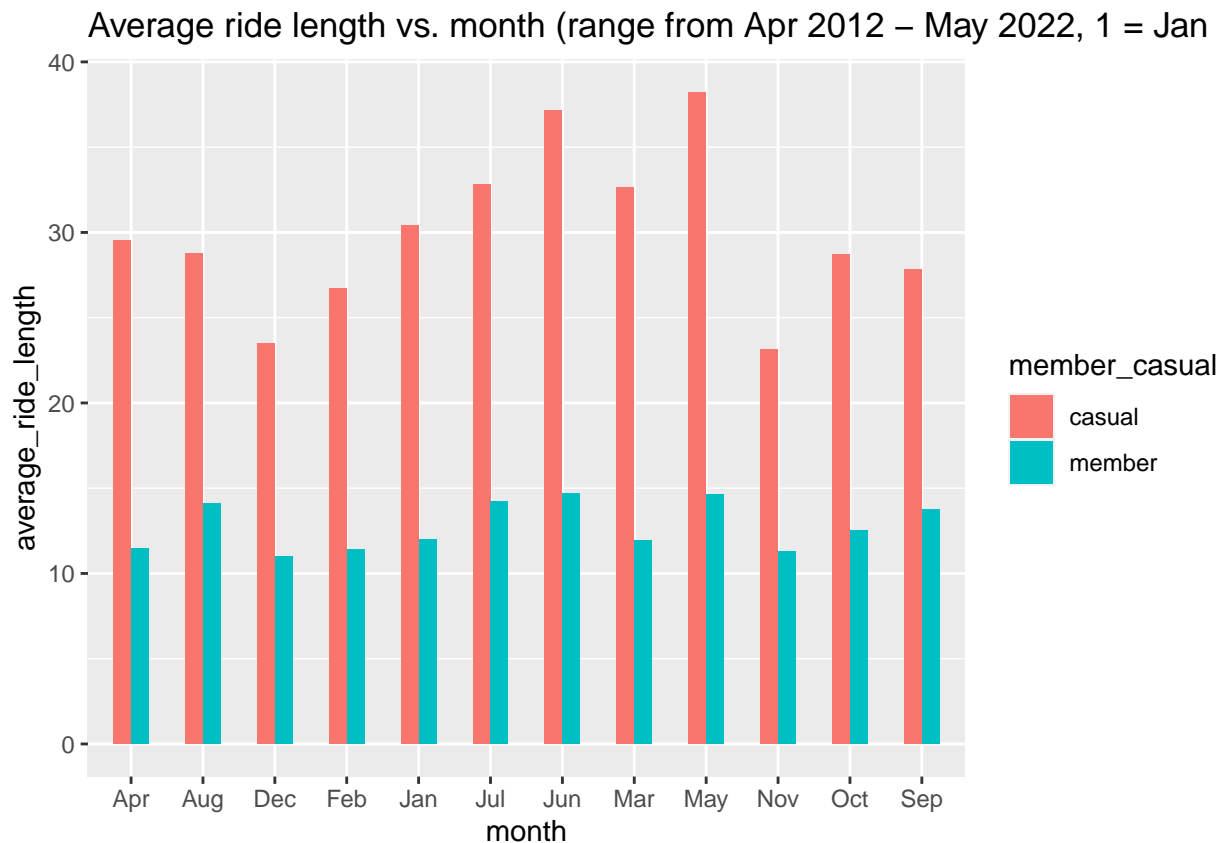

Take away: Given the average ride length over the year is: 0.2640032 minutes and the longest ride for the year was: 9.542797 hours indicates, in respect with the above, that casuals drive longer and perhaps rent the bike for 'a day' i.e. perceptually they 'hold on' to the bike for a time while exploring the city.

Visualizing average rides by month

```
# visualizing average rides by month
df_1 %>%
  group_by(member_casual, month) %>%
  summarise(average_ride_length = mean(ride_length), .groups = "drop") %>%
  ggplot(aes(x = month, y = average_ride_length, fill = member_casual)) +
  geom_col(width = 0.5, position = position_dodge(width = 0.5)) +
  labs(title = "Average ride length vs. month (range from Apr 2012 - May 2022, 1 = Jan")
```

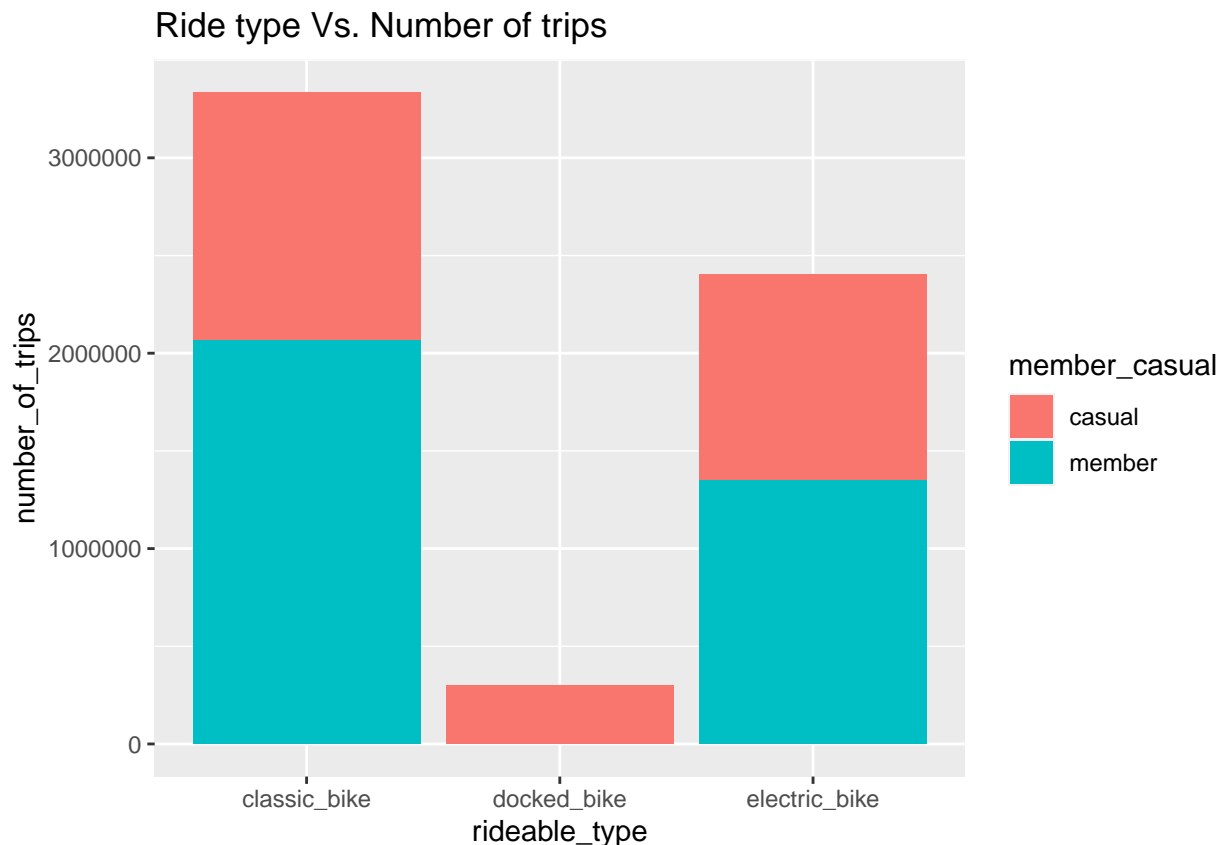

Don't know how to automatically pick scale for object of type difftime. Defaulting to continuous.

Visualization of ride type Vs. number of trips by customer type

```
df_1 %>%
  group_by(rideable_type, member_casual)
) %>%
  summarise(number_of_trips = n()) %>%
  ggplot(aes(x= rideable_type, y=number_of_trips, fill= member_casual))+
    geom_bar(stat='identity') +
    scale_y_continuous(labels = function(x) format(x, scientific = FALSE)) +
    labs(title = "Ride type Vs. Number of trips")
```

`summarise()` has grouped output by 'rideable_type'. You can override using the
`.groups` argument.

Takeaway: Classic bikes are predominantly used by members who make up for the majority of the trips. Docked bikes are in low demand compared to former years. Electric bikes are more favored by members but almost equally used by both members as well as casual riders. If electric bikes costs the highest among all 3 types, it would be a financially sound to increase their fleet while reducing docked bikes (due to low demand), as they are already preferred by users. Note: Data is not available on the quantity of fleet across each type of bikes. Preferences for docked bikes has apparently dropped and we need more data or surveys to make further conclusion however it's valid to look at the dispersion of stations and the congestion of the respective routes and if these has lowered.

Visualizing the start and end positions of rides using latitudes and longitudes co-ordinates. A new dataframe is created with the data needed for a visualization.

```
coordinates_df <- df_1 %>%
  filter(start_lat != end_lng & start_lng != end_lat) %>%
  group_by(start_lng, start_lat, end_lng, end_lat, member_casual, rideable_type) %>%
  summarise(total_rides = n(), .groups = "drop") %>%
  filter(total_rides > 200)

casual_riders <- coordinates_df %>%
  filter(member_casual == "casual")
member_riders <- coordinates_df %>%
  filter(member_casual == "member")

# Storing map of Chicago
chicago <- c(left = -87.700424, bottom = 41.790769, right = -87.554855, top = 41.990119)
chicago_map <- get_stamenmap(bbox = chicago, zoom = 12, maptype = "terrain" )

Maps for casual and member riders

```
ggmap(chicago_map, darken = c(0.1, "white")) + geom_point(casual_riders, mapping = aes(x = start_lng, y = start_lat))

## Coordinate system already present. Adding new coordinate system, which will replace the existing one
## Warning: Removed 57 rows containing missing values (geom_point).
```

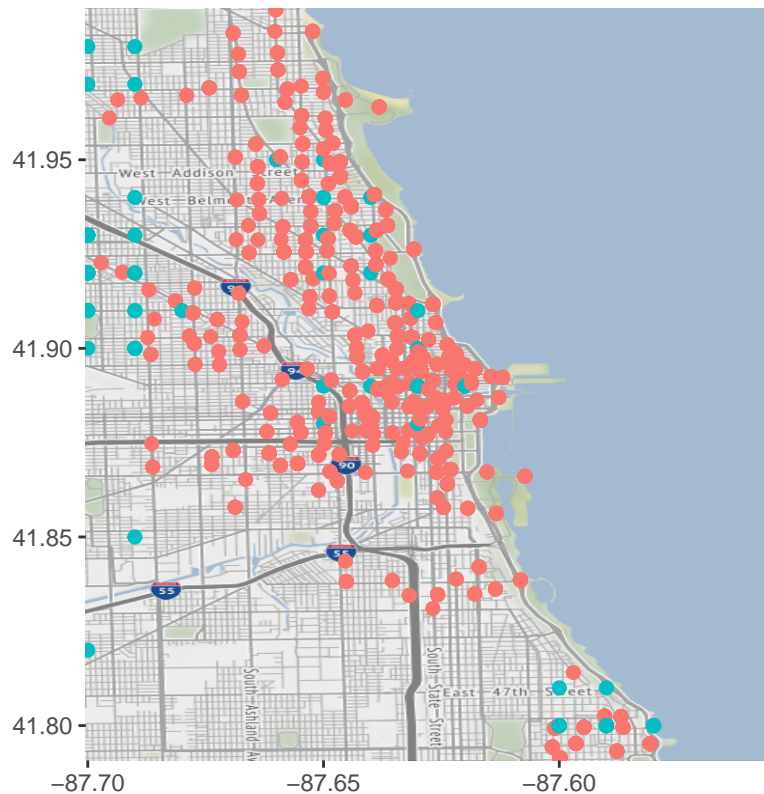

Hotspots of casual riders

```
ggmap(chicago_map, darken = c(0.1, "white")) + geom_point(member_riders, mapping = aes(x = start_lng, y = start_lat))

## Coordinate system already present. Adding new coordinate system, which will replace the existing one
## Warning: Removed 139 rows containing missing values (geom_point).
```

Hotspots of member riders

Take away: The Hotspot maps reveals a fare larger spatial or geographical spread between causals and members loading docks indicating, maybe not surprisingly, that members usage is for commuting while causals primary utilizes for leisure activities at attractive points.

Act

The study has revealed a diametrically different trend towards more steady members as seen from the previous year so current measures should, all things considered, remain in effect.

The geographical dispersion of loading docks would be a relevant input and object for a further study, hence a large part of the regular customers is expected to be daily commuters and their routes should be included. Likewise, recreational hotspots should, if not already accounted for, be subject to coverage.

Potential weekend deals for casual users or seasonal passes could potentially persuade users into being regular members in the long run. Likewise, discounts if using less congested routes could give non regular customers incentive to steady disbursements and more frequently use.
